ELSEVIER

Author Index to Volumes 139–146

Andersson, Håkan, 140:79
Arani, Ramin B., and M. Bhaskara Rao, 146:63
Axelrod, Daniel, 141:149
Axelrod, D. E., *See* Staudte, R. G.

Bahrampour, Abbas, *See* Becker, Niels G.
Bassingthwaighte, J. B., *See* Wang, C. Y.
Basson, Marinelle, and Michael J. Fogarty, 141:41
Becker, Niels G., and Abbas Bahrampour, 142:63
and Dianna N. Starczak, 139:117
Bertuzzi, Alessandro, Alberto Gandolfi, Carmela Sinisgalli, and Daniela Iacoviello, 143:61
Bishir, John, and James Roberds, 142:1
Boggio Ronceros, Rafael, Oscar Sorarrain, Juan C. Salerno, and Ewald A. Favret, 140:85
Britton, Tom, 141:79
Busoni, Giorgio, and Serena Matucci, 143:1
Byrne, H. M., 144:83

Cazelles, B., and N. P. Chau, 140:131
Chau, N. P., *See* Cazelles, B.
Clements, John C., See Horáček, B. Milan
Cole, G. K., *See* Wu, J. Z.

Dietz, Klaus, *See* Stilianakis, Nikolaos I.
Dye, C., *See* Williams, B. G.

Fairén,Victor, *See* Hernández-Bermejo, Benito
Favret, Ewald A., *See* Boggio Ronceros, Rafael
Fogarty, Michael J., *See* Basson, Marinelle

Gandolfi, Alberto, *See* Bertuzzi, Alessandro
Gaylor, David W., *See* Zheng, Qi
Gonzo, M., *See* Iannelli, M.
Grist, Eric P. M., and William S. C. Gurney, 145:1
Gupta, Ramesh C., Nandini Kannan, and Aparna Raychaudhuri, 139:103
Gurney, William S. C., *See* Grist, Eric P. M.

Hadeler, K. P., and P. van den Driessche, 146:15
Happel, Robert, *See* Hecht, Robert
Hecht, Robert, Robert Happel, Peter Schuster, and Peter F. Stadler, 140:33
Hernández-Bermejo, Benito, and Victor Fairén, 140:1
Herzog, W., *See* Wu, J. Z.
Hethcote, Herbert W., 145:89
Hinderer, Karl, and Alfred Müller, 142:31
Horáček, B. Milan, and John C. Clements, 144:119
Huggins, R. M., *See* Staudte, R. G.
Hurn, A. S., K. A. Lindsay, and C. A. Michie, 143:91

Iacoviello, Daniela, *See* Bertuzzi, Alessandro
Iannelli, M., F. A. Milner, A. Pugliese, and M. Gonzo, 139:25

Kannan, Nandini, *See* Gupta, Ramesh C.
Katopodes, Nikolaos D., 140:75
Kimmel, M., *See* Staudte, R. G.
Komarov, V. P., *See* Petin, V. G.

Lindsay, K. A., *See* Hurn, A. S.
Lindsay, Kenneth A., *See* Wheldon, Elizabeth G.
Lungu, E. M., and B. Øksendal, 145:47
Lutz, Werner K., *See* Zheng, Qi

Mao, Jian-Hua, *See* Wheldon, Elizabeth G.
Matucci, Serena, *See* Busoni, Giorgio
May, Robert M., Dov J. Stekel, and Martin A. Nowak, 139:59

ELSEVIER

Subject Index to Volumes 139–146

Age-structured model for pertussis transmission, 145:89
AIDS, model for pathogenicity of, 145:27
Antigenic diversity thresholds and hazard functions, 139:59
Auditory dynamic range derived from mean rate-intensity function in the cat, 141:1
Autocatalytic networks with intermediates: irreversible reactions, 140:33
Avascular tumor growth, effect of time delays on dynamics of, 144:83

Backward bifurcation in epidemic control, 146:15
Bayesian design criterion, optimization of, 144:45
Biological growth on a surface, 142:91
Blood flow through stenotic arteries, suspension model, 139:79
Blue-green algae, multitype branching process model for, 145:137
BOOK REVIEW: Axelrod, Daniel, What Is Life? The Next Fifty Years. Speculations on the Future of Biology (Michael P. Murphy and Luke O'Neill, Eds.), 141:149
BOOK REVIEW: Katopodes, Nikolaos D., Modelling Change in Environmental Systems (A. J. Jakeman, M. B. Beck, and M. J. McAleer, Eds.), 140:75
BOOK REVIEW: Rivero-Hudec, Mercedes A., Basic Biochemical Laboratory Procedures and Computers (R. Cecil Jack), 142:119
Branching processes, discrete time spatial models arising in, 140:101

Cancer, breast and ovarian, treated with paclitaxel, model, 146:89
Cancer model, two-stage deterministic, model parameters in, 146:1
Carcinogenesis model describing mutational events at the DNA adduct level, 144:23
Childhood acute lymphoblastic leukemia, two-stage model for, 139:1
Clonal forestry, risk analysis in, 142:1
Clonal heterogeneity and interexperiment variability, estimating with bifurcating autoregressive model, 143:103

D'Arcy Thompson, spirit of, and empirical morphospace, 142:13
Discrete time spatial models arising in genetics, evolutionary game theory, and branching processes, 140:101
Drug delivery, control model, 146:75
Dynamic contraction of muscle, modeling using cross-bridge theory, 139:69

Electrocardiography, the inverse problem of, a solution in terms of single- and double-layer sources on the epicardial surface, 144:119
Epidemic, simple, models for, 141:29
Epidemic control, backward bifurcation in, 146:15
Epidemic model, cost-minimal immunization in, 142:31
Epidemic modeling, 146:15
Epidemics, in a population with social structures, 140:79
  preventing with age-specific vaccination schedules, 142:63
  testing for homogeneous mixing in, 141:79
Evolutionary game theory, discrete time spatial models arising in, 140:101

Genetics, discrete time spatial models arising in, 140:101

MATHEMATICAL BIOSCIENCES 146: 133–135

0025-1066/97/$17.00
PII S0025-5564(97)00115-6

Harvesting, in discrete-time predator-prey systems, 141:41
in a stochastic crowded environment, 145:47
Harvesting policy, optimal, in age-dependent populations, 143:1
Hazard functions for HIV, 139:59
HIV and the spread of tuberculosis, 143:35
HIV infection from transfusion of screened blood, risk of, 141:101
HIV/AIDS epidemic, using Kalman factor to assess, 140:131
HIV/AIDS epidemics among drug injectors, contact structure model, 139:25
Human T lymphocyte subsets, modeling lifespan of, 143:91
Huxley's cross-bridge model and dynamic contraction of muscle, 139:69
Hyperthermia and ionizing radiation, synergistic interaction of, 146:115

Immunization, cost-minimal, in Greenwood epidemic model, 142:31
Infectious disease persistence when transmission varies seasonally, 145:77
Insect-pathogen dynamics, 141:115
Intravenous drug delivery, automatic control of, 146:75
Ionizing radiation, synergistic interaction of hyperthermia and, 146:115

Kalman factor, modeling HIV/AIDS epidemic, 140:131

Leslie matrix models, reproductive delay in, 146:37
Lethal factors in plant populations, theoretical analysis, 140:85
Leukomogenesis, hereditary and nonhereditary, application of childhood leukemia model to, 139:1
Lotka-Volterra representation of general nonlinear systems, 140:1

Mean rate-intensity function in the cat, 141:1
Model parameters in a two-stage cancer model, determinability of, 146:1
Morphospace, spirit of D'Arcy Thompson in, 142:13
Multitype branching process model for blue-green algae, 145:137
Mutational events at the DNA adduct level, a carcinogenesis model, 144:23

Nonlinear regression models, Bayesian design criterion for Bayesian parameter estimation of, 144:45
Nonlinear survival probabilities, 146:37
Nonuniform cell loss, Steel's Tpot in cell populations affected by, 143:61

Optimal harvesting policy in two-stage age-dependent populations, 143:1

Paclitaxel, model of cancer treated with, 146:89
Parastichies, another look at, 144:71
Persistence of seasonally transmitted disease, 145:77
Pertussis transmission, age-structured model for, 145:89
Pharmacokinetic-pharmacodynamic models, closed-loop stability of, 146:75
Plant populations, lethal factors in, 140:85
Precancerous lesions induced by radiation, do cells repair?, 142:107
Predator-prey systems, discrete-time, harvesting in, 141:41
with a prey refuge, prey dominance in, 144:155

Radiation, do cells repair precancerous lesions produced by?, 142:107
Reproductive delay in Leslie matrix models, 146:37
Reproductive schedules in a density-dependent recruitment model, 144:1
Risk analysis in clonal forestry, 142:1

Selection in prediction of effective population size for a sex-linked locus, 142:79
Sex-linked locus, effective population size for, 142:79
SIRS models, epidemiological, 146:15
Stage-specific life cycles, 145:1
Steel's potential doubling time under nonuniform cell loss, 143:61
Stenotic arteries, model for blood flow through, 139:79
Survival data, lognormal, 139:103

Survival experiment, 2(2, a result on, 146:63
Synchronicity, seasonal, in *Catops nigricans*, 145:1
Synergistic interaction of hyperthermia and ionizing radiation, 146:115

Taxol, mathematical model of cancer treated with, 146:89
Topp's beetles revisited, 145:1
Tuberculosis in the United States, impact of HIV on, 143:35
Two-stage deterministic cancer model, parameters in, 146:1

Vaccination schedules, age-specific, preventing epidemics with, 142:63
Vaccination strategies for community of households, optimal, 139:117
Vaccination strategies, optimal for whom?, 139:133
